

Create Booklet 2 for macOS

*Pro grade booklets for everybody
everywhere*

Create Booklet 2 was born with the goal to bring Pro level tools within the reach of anybody.

If the print plugin, first, gave everybody the ability to print booklets, and version 1, then, gave the possibility to control every parameter, version 2 makes even the most complex feature accessible to anyone.

It is with this idea in mind that Presets were born. Do you want to print a simple booklet? 1 click. Do you need to begin with a weird paper format and print into A4? 1 click. Do you want a home-made book? 1 click. Even the new mini- and micro-booklets are 1 click away! And for who needs to automate the process even more, Presets are user-definable too, a big advantage for everyone, especially Pro users!

Who will then want to dive into the advanced controls section will find a plethora of features to control even the finest detail: sided pages, page numbers, zoom, staple markings, cut margins, trim, add, rotate... something could go missing even in the most experienced hands! Here then Create Booklet 2 steps up with one of its newest and handiest features: Automatic Warning System. Create Booklet checks all options and set parameters and warns you if it finds something that doesn't seem right, suggesting you where and how to solve the issue.

Create Booklet 2 also gives more control to Pro users. On top of all the Pro features version 1 had, like creep compensation and split-booklets, version 2 adds the ability to define a PDF-crop box, print imposition, z-fold support and much more.

Ease of use and firing power, all packed in an app that doesn't leave room for mistakes: every detail has been refined, code checked and partially rewritten using the new coding language signed Apple, Swift.

You may find a more complete description of all the new features of Create Booklet on the Mac App Store or on our website, let me list here just a few:

- native PDF editing: add or remove pages, rotate, trim, add page numbers and more;
- have fun with the new mini and micro-booklets! Make A6 or A7 booklets starting with whatever page format you have;
- make a home made book... you'll just need some glue!
- Staples and cut guides;
- define your own preset and save them as default;
- fit source format into print format;

You can find Create Booklet 2 on the [Mac App Store](#) for 19.99\$
