

Create Booklet 1.3 for OS X

Booklet Factory is here!

Summary

TheKeptPromise is pleased to announce the release of Create Booklet 1.3, an update to its popular booklet printing app for Mac OS X. Create Booklet allows their +120,000 users to create a booklet from almost any file from within almost any software. Thanks to the app, the user saves money, time and paper when printing many pages. This free upgrade is available in English, German, Italian and French.

The Booklet Factory extends our reach to all conductors, translators, choir directors and everybody who quickly needs to create multiple booklets at once.

Announcement

April 27, Ratingen, Germany - TheKeptPromise is pleased to announce the release of Create Booklet 1.3 for Mac OS X, an update to its app and PDF service. The app allows the user to create a booklet from almost any file from within almost any software. Create Booklet is the standard solution for creating booklets since 2005, with over 120,000 users.

New in 1.3

Create Booklet 1.3 marks the end of the old Create Booklet automator action as with 1.3 all features are included. This means our long term customers can finally update to El Capitan. The Booklet Factory goes far beyond its predecessor, it allows the instant printing and exporting of multiple booklets with individual or shared settings. We also extended the app to allow saving default settings for document or factory processing as well as creating booklet paper formats on the fly based on the input format.

New Features

- Booklet Factory: automated Batch processing with all bells and whistles
- Save all settings as default
- Automatic paper size

Road to Create Booklet 1.3

Create Booklet started with a simple PDF Service that was enhanced by customer's requests, but quickly reached the limit of a Service and so the Create Booklet app 1.0 was born.

When version 1.1 came to the App Store, it was the first app to allow printing duplex booklets on any printer, using the manual duplex method. After every release, TheKeptPromise listened very carefully to their user's requests. As a result, Create Booklet 1.2 added Pro features like Page Numbering, Creep Compensation as well as an improved layout and an extended help section. 1.3 releases the Automator Action off duty and integrates a professional batch workflow right into Create Booklet: Booklet Factory.

Features

- Booklet Factory: Convenient batch processing built-in
- Straight Order
- Support for auto-rotation of landscape pages
- Set last page for numbering
- Manual Duplex: Print duplex, even with a non-duplex printer
- Create a booklet from any app: Open Create Booklet directly from the print panel
- Direct PDF editing: Add Empty pages, add images, add complete PDFs, reorder pages, remove unneeded pages
- Page Numbering
- Creep Compensation
- Auto help when you need it
- Save a booklet to a new PDF
- Rasterize broken PDFs
- Select output print format and orientation
- Layout your PDF to the final output size using zoom and position setting
- Reverse booklet page order (allows right to left documents usage!)
- Split thick booklets into multiple thin ones
- Easily staple booklets: Create Booklet adds staple marks on the first and last page
- Available in English, German, Italian and French

See what our customers have to say about Create Booklet:

"Wow. I wish I'd known about it years ago [...]. I've just used Create Booklet to make the first ever books for the Bumthang people in their own language. Thank YOU." — **Mark**

"THANK YOU for Create Booklet! I have used it several times now to print out playbills for my children's various school plays, and it has been an absolute lifesaver." — **William W. Lin**

"I was desperately looking for a quick and easy way of making a Christmas Carol booklet. I came across this site, and it was almost like a Christmas miracle ;-) Thanks so much for making and sharing Create Booklet. It works perfectly and really helped me out." — **Dan**

System Requirements

- OS X 10.7 or later
- 64-bit processor

Pricing and Availability

Create Booklet 1.3 is available worldwide in English, German, French and Italian in the Mac App Store for \$9.99.

About TheKeptPromise

TheKeptPromise, home of apps like MyTeeth (which was featured by Apple in their „parenthood“ TV ad), is an app development company based in Ratingen/Germany and creates software that lives up to its promise. The company develops solutions in areas they feel the customer needs are not met. TheKeptPromise is a start-up of award winning professionals who have published scientific papers, have had photos selected by National Geographic, 1px and more.
